

Project Design Phase-II Data Flow Diagram & User Stories

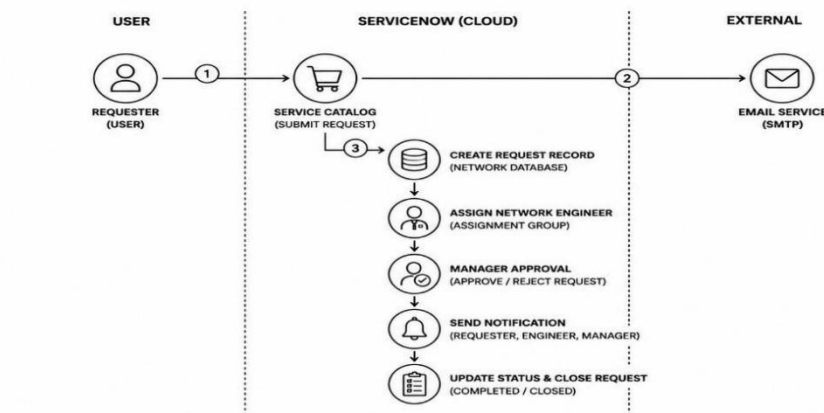

Date	29 June 2026
Project Name	Automated Network Request Management System
Maximum Marks	4 Marks

Data Flow Diagrams

A **Data Flow Diagram (DFD)** is a graphical representation that illustrates how information moves within a system. It provides a clear and structured view of the system requirements by showing how data enters the system, how it is processed, where it is stored, and how it exits the system. This helps in understanding the overall flow of data and the interactions between different system components.

Example:

Flow

1. User (Requester) submits a network request through the Service Catalog.
2. System sends email notification for request submission, approval, rejection and completion.
3. A network request record is created in the Network Database.
4. The request is assigned to the appropriate Network Engineer.
5. The request is sent to the Manager for approval.
6. Based on approval, the request status is updated and notifications are sent.
7. The request is completed and closed after the work is done.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee (Requester)	Submit Network Request	USN-1	As an employee, I can submit a network request through the Service Catalog.	Request is created successfully with a unique Request Number.	High	Sprint-1
Employee (Requester)	Request Details	USN-2	As an employee, I can enter network details such as device, address, and enquiry date.	All mandatory fields are saved correctly.	High	Sprint-1
Employee (Requester)	View Request Status	USN-3	As an employee, I can view the status of my submitted request.	Current request status is displayed correctly.	High	Sprint-1
Manager	Approval Workflow	USN-4	As a manager, I can approve or reject the assigned network request.	Approval decision is recorded successfully.	High	Sprint-1
Manager	Approval Notification	USN-5	As a manager, I receive an approval notification for pending requests.	Notification is received with request details.	High	Sprint-1
System	Email Notification	USN-6	As the system, I send email notifications to the requester after approval or rejection.	Email is sent automatically after approval action.	High	Sprint-1
System	Record Creation	USN-7	As the system, I create a Network Database record when a request is submitted.	Record is created with all entered details.	High	Sprint-1
System	Update Request Status	USN-8	As the system, I update the request status after manager approval or rejection.	Status changes to Approved or Rejected automatically.	High	Sprint-1
Administrator	User Management	USN-9	As an administrator, I can manage users and assign manager details.	Users and manager information are updated successfully.	Medium	Sprint-2
Administrator	Assignment Management	USN-10	As an administrator, I can assign network requests to appropriate employees or groups.	Assigned user/group is updated correctly.	Medium	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Reporting	USN-11	As an administrator, I can generate reports for network requests and approvals.	Reports display accurate request and approval data.	Medium	Sprint-2
Employee (Requester)	Email Confirmation	USN-12	As an employee, I receive confirmation when my network request is completed.
