

Project Design Phase
Proposed Solution

Date	29 June 2026
Project Name	Automated Network Request Automation System
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The existing network request process is manual, time-consuming, and lacks proper tracking. Employees experience approval delays, poor visibility, and inefficient communication between requesters and managers.
2.	Idea / Solution description	Develop an automated Network Request Management System in ServiceNow using Workflow Studio. Employees submit requests through the Service Catalog, managers approve or reject requests automatically, email notifications are sent, and request status is updated in real time.
3.	Novelty / Uniqueness	Uses ServiceNow Flow Designer to automate the complete approval workflow, manager-based approvals, email notifications, real-time status tracking, and centralized request management with minimal manual intervention.
4.	Social Impact / Customer Satisfaction	Reduces approval time, improves transparency, minimizes manual errors, enhances employee satisfaction, increases IT team productivity, and provides a better service experience.
5.	Business Model (Revenue Model)	Implemented as an enterprise IT Service Management (ITSM) solution within ServiceNow. Organizations benefit through reduced operational costs, improved workflow efficiency, and increased productivity rather than direct customer revenue.
6.	Scalability of the Solution	The workflow can be easily extended to support additional request types, multi-level approvals, multiple departments, larger organizations, and integration with other ServiceNow modules such as Incident, Change, Asset, and CMDB.
