

Functional & Performance Testing

Model Performance Test

Date	29 June 2026
Project Name	Automated Network Request Management System

Test Scenarios & Results

Test Case Scenario (What to Test) ID	Test Steps (How to Test)	Expected Result	Actual Result	Pass / Fail
FT-01	Network Request Form Validation Enter valid and invalid values in the Network Request form and submit the request.	Valid requests are accepted and invalid inputs display validation messages.	As Expected	 Pass
FT-02	Network Request Record Creation Submit a valid Network Request through the Service Catalog.	A new record is created in the Network Database Table .	As Expected	 Pass
FT-03	Manager Approval Workflow Submit a request and verify that it is sent to the assigned manager.	Approval request is sent to the correct manager.	As Expected	 Pass
FT-04	Approval/Rejection Process Manager approves or rejects the request.	Request status changes to Approved or Rejected automatically.	As Expected	 Pass
FT-05	Email Notification Approve or reject the request and check the employee's email.	Email notification is sent successfully to the requester.	As Expected	 Pass
PT-01	Form Submission Response Time Submit a network request and measure the response time.	Request is submitted within 3 seconds .	As Expected	 Pass
PT-02	Workflow Performance Submit multiple requests simultaneously.	Workflow processes all requests without delays.	As Expected	 Pass
PT-03	Database Performance Create multiple network request records continuously.	Records are created successfully without affecting performance.	As Expected	 Pass

PT-04	Concurrent Approval Test	Multiple managers approve requests at the same time.	All approvals are processed correctly without conflicts.	As Expected	 Pass
PT-05	System Reliability Test	Execute the complete workflow multiple times.	Workflow runs consistently without errors or failures.	As Expected	 Pass
